

Install configure Window Server 2019

Download the .iso file of window from the official window website.

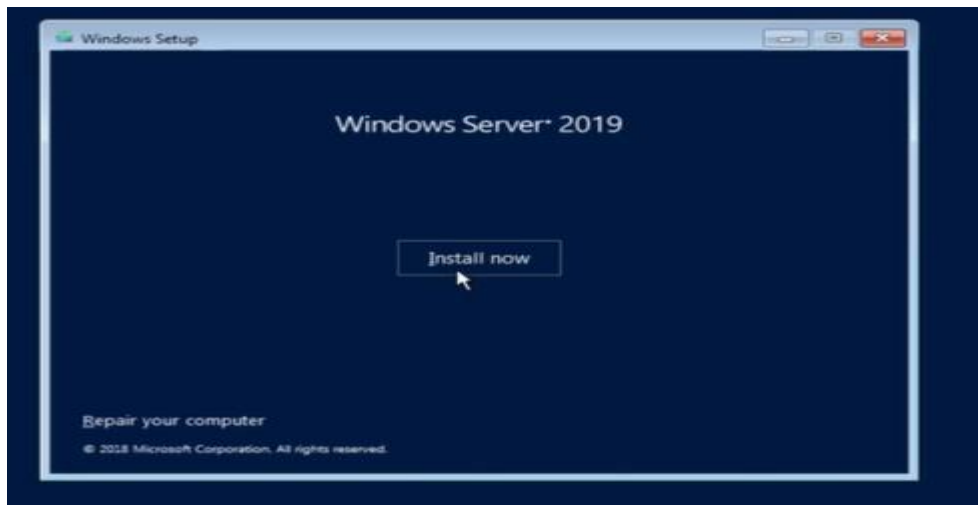

And start installing on vmware.

It also same with minor difference but if you face any difficulty then search it .

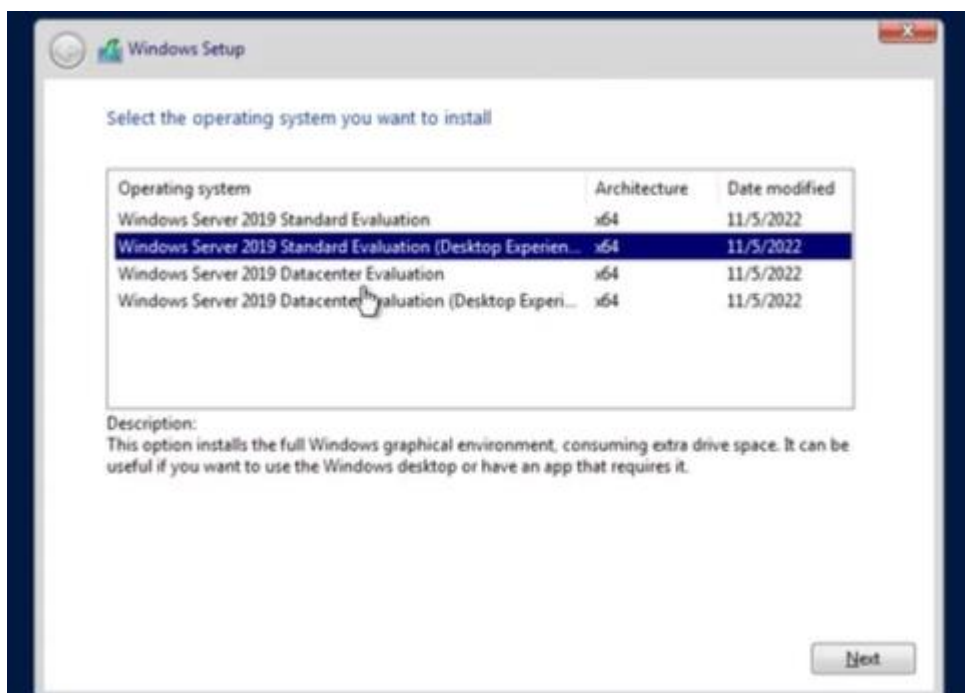

- Open new virtual machine
- Select custom
- Then next
- Then select option – I will install OS later
- Then select guest OS window and version window server 2019
- Give name and select place where you want to install it
- Then UEFI (recommende)
- Select processor
- Select RAM
- Select NAT
- Select hard drive LSI (recommended)
- Select NVme (recommended) disk type
- Select create new virtual disk
- Give space 100GB and select store virtual disk as single file
- Then next
- Then customize hardware
- And go to NEW CD/DVD and browse the the .iso file location tha you download from the microsoft website.
- Then go to network adapter and custom it ans select vmnat2 as per lab setup.
- Then okay and finish it.
- Machine will power on
- Then installation will start as like window.
- Next here

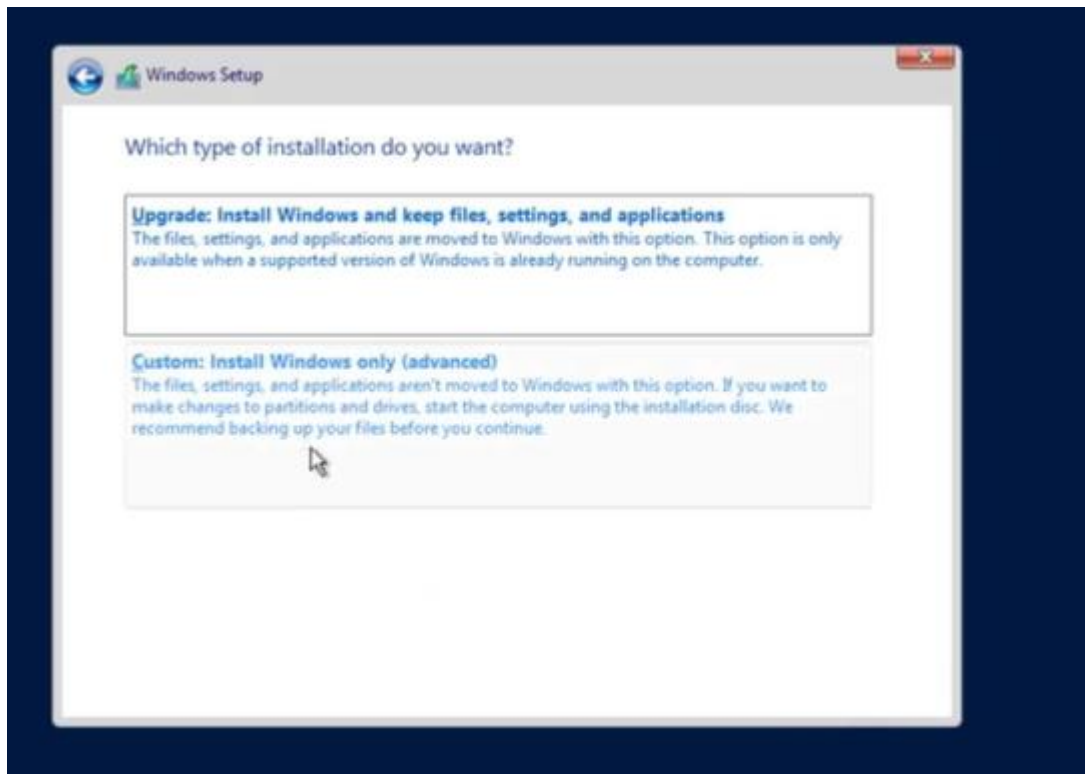

- Install now

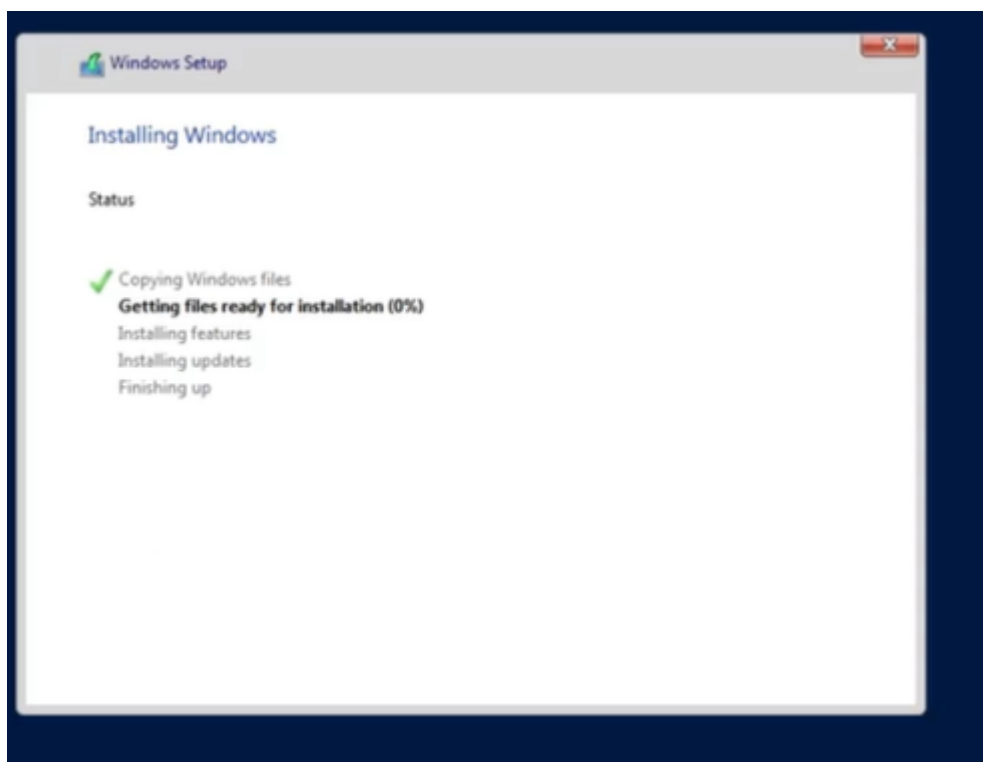

- Select standard with desktop

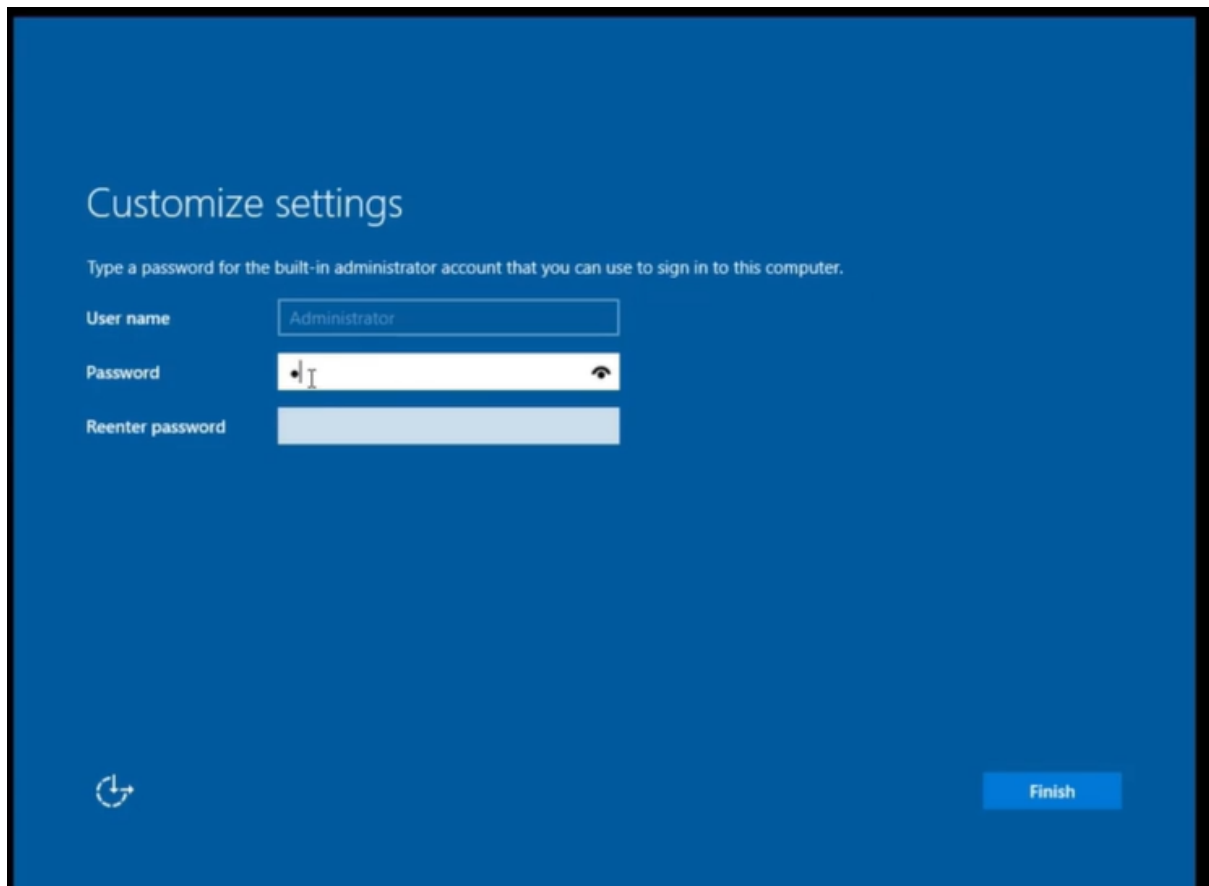

- Then agree
- And then select custom

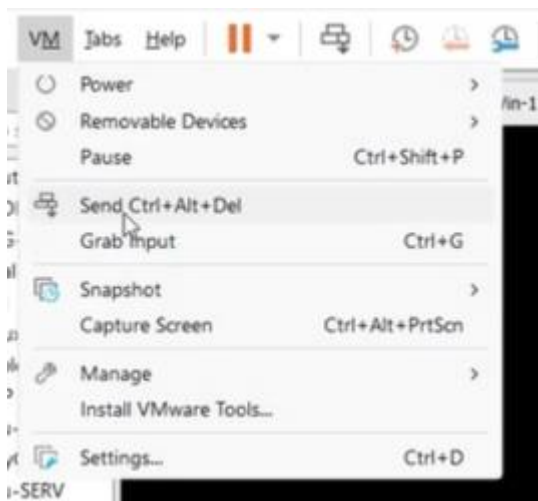

- Then next onn disk drive
- Installation start

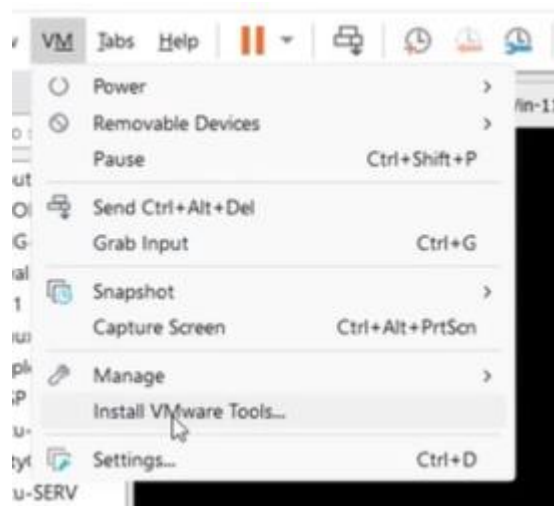

- Give password for admin

- Select ctrl+Alt+Del

- Then give password and login
- Here you see screen is small
- It will install tools automatically for this you can ok it
- Else select option

- And then go to DVD their run the setup64 and install it.

Donot forget to take it at vmvat2 and select ios file at DVD .
